Musings on Future Directions in τ Physics

P2 - Flavor - [Leptons?] - 16/17 July

Rich Galik - Cornell

[with thanks to Jon Urheim, Jean Dubosq & Brian Heltsley]

Questions:

1) Why are there three (?) flavors of charged leptons?
[Who needs μ or τ anyway!?]

2) Can we use the physics of μ or τ to go beyond the SM?

These are related, but not identical.

Presentation:

- basic properties
- general comments on decays
- special decay examples
- "new" phenomena
- summary
